Compact track loader maintenance schedule

FleetOptima
fleetoptima.org

For compact track loaders. Most of this matches a skid steer, plus the undercarriage: packed mud in the rollers and the wrong track tension are what wear tracks out early. The makers really disagree on engine oil, so check yours.

Typical intervals from manufacturer manuals and published service schedules. Your machine's manual comes first.

Break-in (new machines)

TASK	HOW OFTEN	NOTES	✓
Go easy on full throttle and full load	First 50 hours	Per at least one major maker	
First hydraulic filter change	About 50 hours	Varies by model	
First drive motor gear oil change	About 250 hours	Varies by model	

Every day or 10 hours

TASK	HOW OFTEN	NOTES	✓
Check engine oil, hydraulic fluid and coolant	10 hours	Before starting	
Clean the radiator, cooler, grilles and engine bay	10 hours		
Grease lift arms, links, cylinder pivots and quick-attach	10 hours		
Seat belt, seat bar and control lockouts	10 hours		
Clean packed mud out of the rollers and idlers	Daily	Packed mud stretches tracks and wears rollers	
Look over tracks, rollers and idlers	Daily	Cuts, chunks missing, leaks	
Drain water from the fuel filter	Daily or when the display says		

By hours

TASK	HOW OFTEN	NOTES	✓
Track tension	Every 50 to 100 hours	Recheck after mud or clay; sag spec per your manual	
Engine oil and filter	Every 250 to 750 hours or yearly	Makers disagree by 3 times; use your manual's number	
Air filter	Check about every 50 hours, or per the indicator		
Fuel filters	Every 500 to 1,000 hours or yearly		
Hydraulic filters	Every 500 to 1,000 hours or yearly		
Drive motor gear oil	Every 500 hours or yearly		
Hydraulic fluid	Every 1,000 hours or yearly		
Coolant	Every 2 years	Some makers say 1,500 hours
