Pump maintenance schedule

FleetOptima
fleetoptima.org

For sump, water and transfer pumps. There's no one schedule that fits every pump, so the most useful thing you can do is log hours and compare how it's performing against when it was new.

Typical intervals from manufacturer manuals and published service schedules. Your machine's manual comes first.

Weekly to monthly

TASK	HOW OFTEN	NOTES	✓
Walk-around: leaks, noise, vibration, heat	Weekly to monthly	Guards in place	
Packing: check wear, adjust or repack	Monthly	Packed pumps only; mechanical seals just get replaced when worn	

Quarterly

TASK	HOW OFTEN	NOTES	✓
Sump pumps: test the float	Quarterly	Lift the float or pour water in; it should start and stop on its own	
Clear debris from the inlet screen	Quarterly		

By hours

TASK	HOW OFTEN	NOTES	✓
Grease bearings	About every 2,000 hours or 3 to 6 months	Varies a lot by model; use the grease your manual names	

Yearly

TASK	HOW OFTEN	NOTES	✓
Check pump and motor alignment	Yearly		
Check mounts, bearings and belts	Yearly		
Check wiring, breakers and moisture protection	Yearly		
Compare flow and pressure to when it was new	Yearly	Dropping numbers mean wear	

Service log: pump

Machine / unit: _____ Make & model: _____
