Work truck maintenance schedule

FleetOptima
fleetoptima.org

For crew pickups and service trucks. Almost every work truck belongs on the severe schedule: towing, hauling, idling at job sites and dirt roads all count. Track engine hours as well as miles, because idling wears the engine without adding miles.

Typical intervals from manufacturer manuals and published service schedules. Your machine's manual comes first. If your truck has an oil-life monitor, it's the boss.

Every day

TASK	HOW OFTEN	NOTES	✓
Walk around it	Daily	Tires, lights, leaks, load tied down	

Oil changes

TASK	HOW OFTEN	NOTES	✓
Normal use	7,500 to 10,000 miles or yearly	Or when the oil-life monitor says	
Severe: towing, hauling, idling, dirt roads	5,000 to 7,500 miles		
Extreme: max towing, extreme heat or cold	3,000 to 5,000 miles		
Lots of idling (engine hours)	About every 200 to 350 engine hours	Whichever comes first, miles or hours	

At every oil change

TASK	HOW OFTEN	NOTES	✓
Rotate tires, check tread	Every oil change		
Brakes: pads, rotors, lines, parking brake	Every oil change		
Coolant strength and hoses	Every oil change		
Steering, suspension, ball joints, U-joints	Every oil change	Grease where there are fittings	
Belts, battery, lights, wipers, fluid levels	Every oil change		

By miles

TASK	HOW OFTEN	NOTES	✓
Engine air filter	About 30,000 miles	Check much more often in dust	
Cabin air filter	Per your manual	Often around 20,000 miles	
Diesel fuel filter	Every other oil change	About 15,000 miles in severe use	
Spark plugs (gas)	About 100,000 miles	Sooner on the severe schedule	
Transmission and transfer case fluid	Per your manual	Far sooner for towing: often 30,000 to 60,000 miles	
Axle fluid	Per your manual	Change if it tows or works off-road	
Coolant	First change around 100,000 miles	Per your manual
